Introduction to Google Charts Tool

Tiago Araújo & Beatriz Sousa Santos 2019

Web Technologies

- The World Wide Web is a environment full of capabilities
- HTML, CSS, Javascript and SVG are the building blocks of Web Visualization
- Used beyond the web: mobile and desktop environment

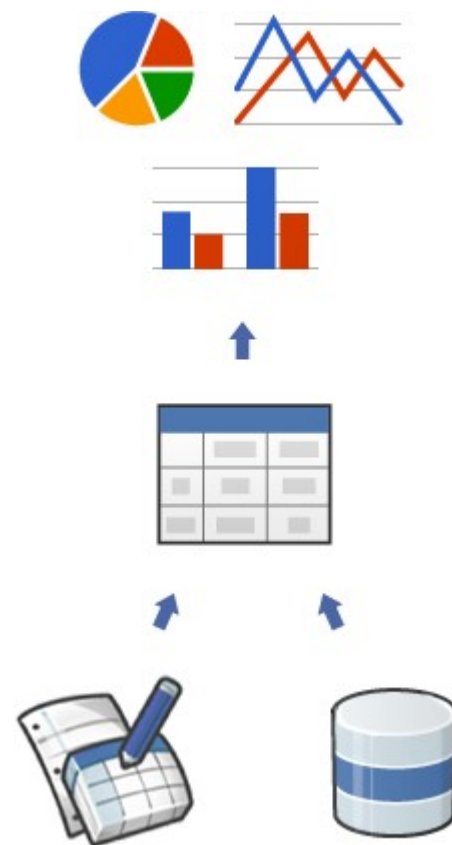

Example

```
<!DOCTYPE html>
<html>
  <head>
    <title>Hello CSS</title>
    <style>
      p {
        text-align: center;
        color: red;
        font-size: 100px
      }
      body {
        background-
color: gray
      }
    </style>
  </head>
  <body>
    <p>Hello World!</p>
  </body>
</html>
```

Hello World!

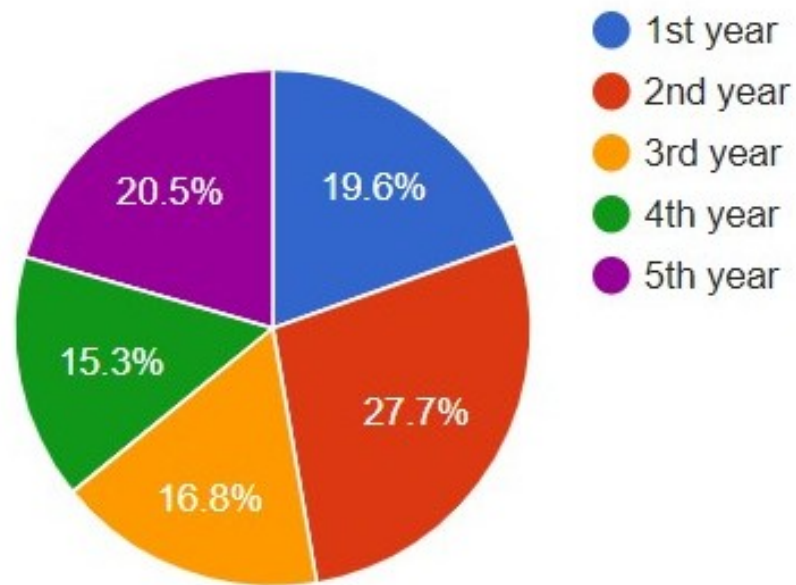

Google Charts

- A tool that allows data visualization on the browser
- Only needs a `div` to draw
- Works over the DataTable protocol

Example

UA - MIECT - Students by curricular year

```
<script type="text/javascript" src="https://www.gstatic.com/charts/loader.js"></script>
```

```
<body>
```

```
<!--Div that will hold the pie chart-->
```

```
<div id="chart_div" style="width:400; height:300"></div>
```

```
</body>
```

```
// Load the Visualization API and the corechart package.
```

```
google.charts.load('current', {'packages':['corechart']});
```

```
// Set a callback to run when the Google Visualization API is loaded.
```

```
google.charts.setOnLoadCallback( drawChart );
```

```

function drawChart( ) {
    // Create the data table.
    var data = new google.visualization.DataTable( );

    // First column
    data.addColumn('string', 'Curricular year');

    // Second column
    data.addColumn('number', 'Number of Students');

    data.addRows([['1st year', 79],
                  ['2nd year', 112],
                  ['3rd year', 68],
                  ['4th year', 62],
                  ['5th year', 83]
    ]);

    // Set chart configuration options
    var options = {
        title : 'UA - MIECT - Students by curricular year',
        width : 400,
        height : 300
    };

    // Instantiate the pie chart.
    var chart = new google.visualization.PieChart( document.getElementById('chart_div')
    );
    debugger;
    // Draw the chart, passing in some configuration options.
    chart.draw(data, options);
}

```
